

## ATLAS «PERFORATOR FLAPS IN RECONSTRUCTIVE SURGERY»

Ukrainian scientific and medical literature has been replenished with a presentable edition – the atlas «Perforator Flaps in Reconstructive Surgery». The Atlas authors are *S. V. Slesarenko*, Doctor of Medical Sciences, Professor, member of the Presidium of the All-Ukrainian Association of Plastic, Reconstructive and Aesthetic Surgeons, member of the Association of Burn Surgeons of Ukraine, member of the European Association of Burn Surgeons, and *P. O. Badyul*, Doctor of Medical Sciences, member of the Presidium of the All-Ukrainian Association of Plastic, Reconstructive and Aesthetic Surgeons, member of the Association of Burn Surgeons of Ukraine, American Society of Plastic Surgeons, World Society of Reconstructive Microsurgery, European Association of Burn Surgeons. For the first time in Ukraine, the authors presented and diligently described illustrations of the peculiarities of the blood supply of the covering tissues of different parts of the body during the formation and movement of perforator flaps, as well as specific features of the surgical technique, preoperative preparation, and management of patients in the postoperative period.

The Atlas demonstrates the modern level of knowledges in the field of reconstructive surgery. It contains 29 chapters. The main topic of the Atlas include:

- concepts of perforator flap surgery;
- techniques of performing reconstructions with varieties of local flaps;
- methods of prevention and elimination of complications in reconstructive surgery with perforator flaps;
- postoperative management.

The Atlas includes full-color illustrations that complement the text. It presents the demonstrative clinical cases.

The Atlas authors have not only theoretical training in plastic and reconstructive surgery, but also many years of practical experience in various clinical institutions of the country. This gave the possibility in the publication to discuss thoroughly errors and complications during operations, to perform their systemic analysis, to provide actions' algorithms for prevention of negative consequences in the postoperative period.

The edition is timely and have a great practical importance for improvement of the treatment tactics for the widespread and deep wounds, military injuries, which usually lead to permanent disability. It is the technology of plastic surgery with perforator flaps that makes it possible to prevent amputation and restore function in case of critical limb damage.

The Atlas is intended for specialists of all surgical specialties who are faced with the problem of restoration of covering tissues after complex injuries and oncological resections. The edition can be recommended for the use with educational purpose by students of medical higher education institutions, interns, residents, as well as as a practical guide for plastic surgeons, traumatologists, oncologists who seek to acquire new knowledge and master modern techniques in reconstructive surgery.

The detailed information about the Atlas «Perforator Flaps in Reconstructive Surgery» can be obtained via link <https://atlas.plasticsurgery-ua.org/>.

*The Atlas was published in 2021 in Ukrainian. ISBN 978-966-348-447-11.*
